Caravel

Hydro-compression coffee
machine for the family

Tip. Giunina - Firenze

Officine ARRAREX
CORREGGIO E. Tel. 693264

Lid mount:
 put the lid on top of the container
 and to secure it, push in the direction
 shown by the vertical arrow.
 To open turn the lid towards left
 as indicated by the arrow

How to insert the filter holder:
 keep the holder horizontal and its
 handle in the direction of the
 machine mid-section; push it
 upwards and secure it well
 towards right. Lift the handle all the
 way upwards, it will automatically set
 in the right position. Push it back
 again and with one hand squeeze the
 two arms to check it.

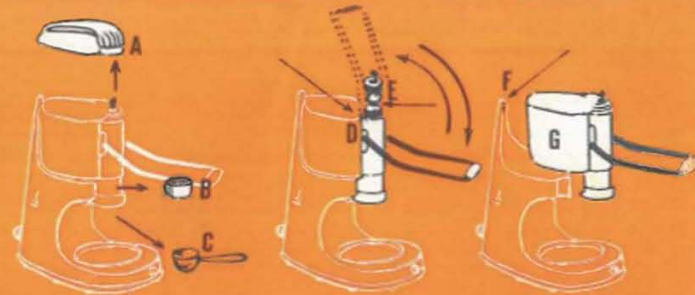

To make coffee:
 with the handle lowered pour water
 in the container (if in a rush, use hot
 water), secure the lid, insert the plug,
 rotate gently the switch that makes
 the control lamp turn on: said lamp
 will automatically turn off when the
 water is boiling (see the setting of
 the thermostat T). The machine
 is ready to make coffee.

Remove the filter holder and with the
 measuring cup (included) put one or
 two doses of ground coffee. With the
 same measuring cup make sure the
 coffee is level and clean the borders
 of the filter holder. Reinsert and
 secure the holder, put the cups under
 it, lift the handle all the way then
 release it for 3 or 4 seconds (not
 more), then lower it applying a
 constant pressure.

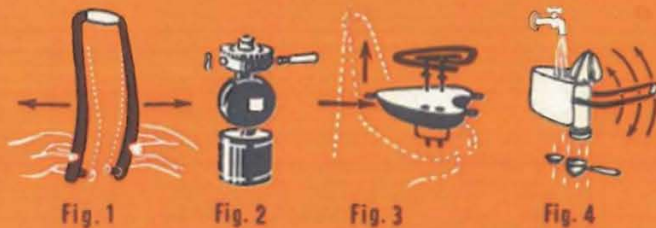

Lift and push the handle to get the
 desired quantity of coffee cream. To
 drain the spent coffee lift the handle
 half-way and lower it fast, repeat
 until small bubbles form from the
 holes in the filter holder.

Dismantling the CARAVEL for cleaning.

With the lid (A) removed press on the blocking lever (F)
 in the direction indicated by the arrow. Remove the half-
 ring (B) and lift the container (G). It can be washed
 liberally. Put the container back in its site and with the
 thumbs press the rear borders until you hear a click (very
 important for proper functioning). Reinsert the half-ring
 (B). We highlight that the CARAVEL can be completely
 dismantled for easy cleaning and fast repairs.

Thermostat settings:

If control lamp turns off when the water is boiling the
 thermostat setting is right. If the lamp turns off too soon,
 unscrew a bit the tuning screw (T) until you obtain the
 right relation between water and lamp. If the lamp is still
 lit and the water keeps boiling, screw (T) to cause the
 lamp to turn off.

Tips:

To preheat the machine, lift and push down the handle
 without any coffee in the filter a couple of times. Vinegar,
 left for a few hours inside the water container, removes
 calcium deposits.

The right grind of the coffee is important to obtain a thick
 crema. If you have no crema, the coffee grind is too
 coarse. If it is difficult to press then the coffee grind is
 too fine.

Technical data.

Holds water for 12-14 coffee cups.

Average power usage: 110Wh.

Size 19x29x32 cm.
